

# MEET THE DESIGNERS!

Thursday, December 4, 2008 7 – 9PM

**PERFORMAMATICS** is a joint project of the Computer Science, Art, Music, and Theatre programs at UMass Lowell. Students from all these majors are working side-by-side, integrating their respective expertise into projects that are exhibited and performed in public venues.

The Discovery Museums are proud to host projects from **Tangible Interaction Design**. This is a new, multi-disciplinary class combining computing, sensing, interaction, and graphic design. UMass Lowell faculty Fred Martin and Karen Roehr invite you to a **MUSEUM OPENING to PLAY** with exhibits created by our students!

The Discovery Museums, located in Acton, Massachusetts, just west of Boston, inspire enduring curiosity and love of learning through interactive discovery, hands-on inquiry and scientific investigations. Younger children learn while they play at the Children's Discovery Museum. Older children explore scientific concepts and hands-on creativity at the Science Discovery Museum.

Supported by the National Science Foundation
